EXP 3

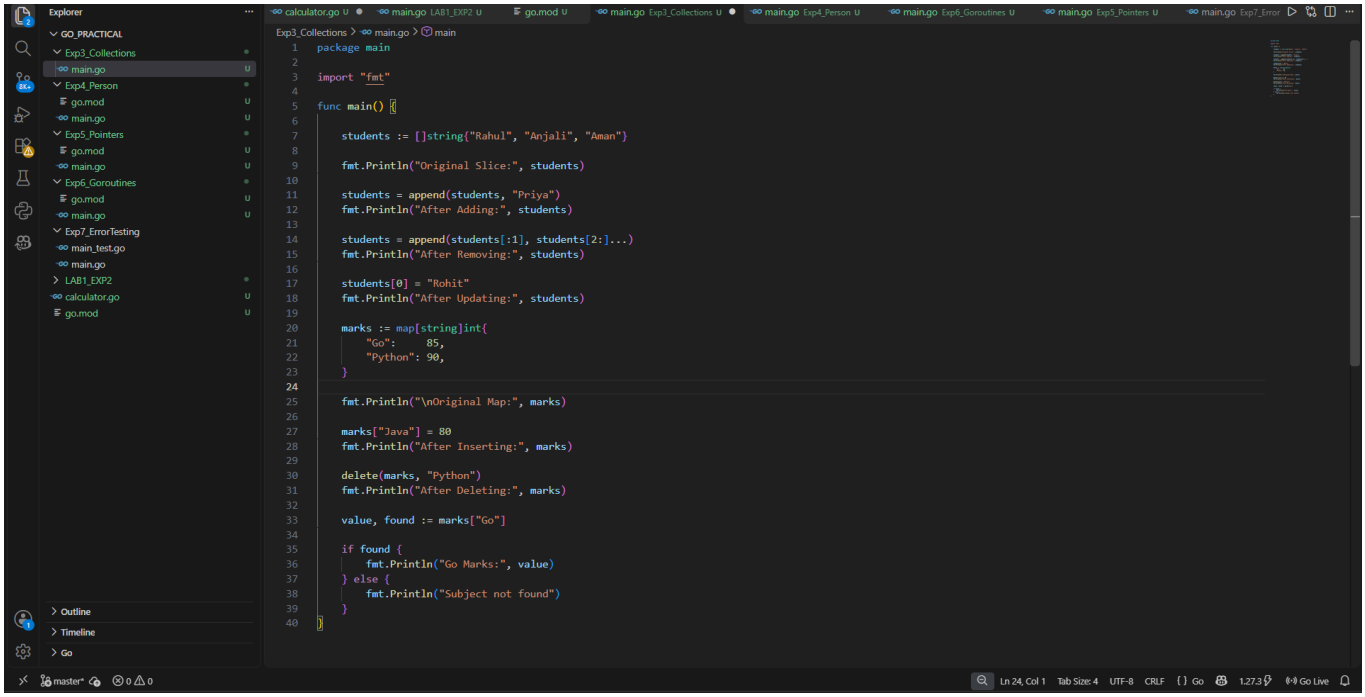

1. Collection Management Using Arrays, Slices, and Maps (Exp 3)

Write a Go program that:

(1) uses a slice to store a collection of elements (e.g., student names or integers) and implements add, remove-by-index, and update operations, printing the slice after each step;

(2) uses a map to store key–value pairs (e.g., subject → marks) and performs insert, delete, and lookup operations, printing the map after each operation.

(3) Push the source file to your GitHub repository. Upload screenshots of the output.

```go
package main

import "fmt"

func main() {

    students := []string{"Rahul", "Anjali", "Aman"}

    fmt.Println("Original Slice:", students)

    students = append(students, "Priya")
    fmt.Println("After Adding:", students)

    students = append(students[:1], students[2:]...)
    fmt.Println("After Removing:", students)

    students[0] = "Rohit"
    fmt.Println("After Updating:", students)

    marks := map[string]int{
        "Go":     85,
        "Python": 90,
    }

    fmt.Println("\nOriginal Map:", marks)

    marks["Java"] = 80
    fmt.Println("After Inserting:", marks)

    delete(marks, "Python")
    fmt.Println("After Deleting:", marks)

    value, found := marks["Go"]

    if found {
        fmt.Println("Go Marks:", value)
    } else {
        fmt.Println("Subject not found")
    }
}
```

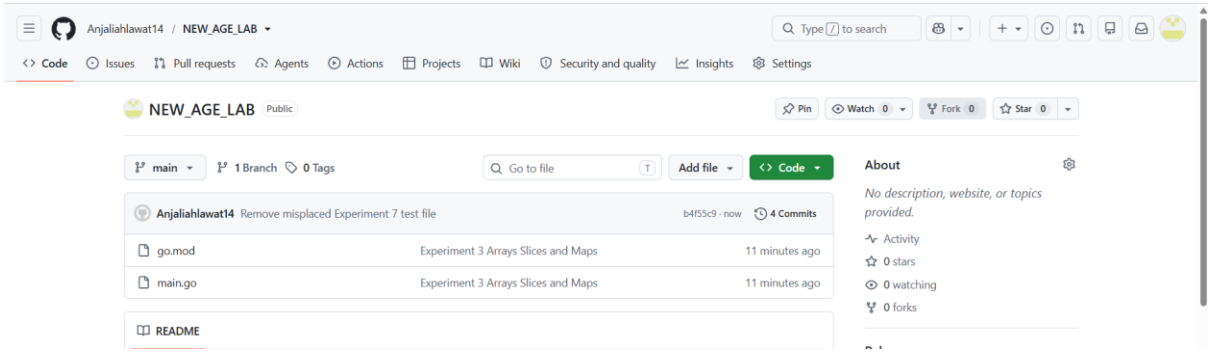

```
C:\Users\HP\OneDrive\Desktop\GO_PRACTICAL>cd Exp3_Collections

C:\Users\HP\OneDrive\Desktop\GO_PRACTICAL\Exp3_Collections>go mod init exp3
go: creating new go.mod: module exp3
go: to add module requirements and sums:
        go mod tidy

C:\Users\HP\OneDrive\Desktop\GO_PRACTICAL\Exp3_Collections>go run main.go
Original Slice: [Rahul Anjali Aman]
After Adding: [Rahul Anjali Aman Priya]
After Removing: [Rahul Aman Priya]
After Updating: [Rohit Aman Priya]

Original Map: map[Go:85 Python:90]
After Inserting: map[Go:85 Java:80 Python:90]
After Deleting: map[Go:85 Java:80]
Go Marks: 85

C:\Users\HP\OneDrive\Desktop\GO_PRACTICAL\Exp3_Collections>
```
